

The IPv4 Marketplace & Advisory

The simple guide to the easy process of buying or selling IP addresses through IPv4.Global.

How it Works

Whether you choose to buy or sell, private or on our online marketplace, our team will work with you every step of the way, handling each deal seamlessly from start to finish.

Private Sales

IPv4.Global executes transactions privately and confidentially, using a customized process for each client. We source addresses to meet buyers' specific needs, and help sellers get the best offer possible for their addresses.

OR

Online Sales

Our online marketplace is the largest in the world with than 5,000 registered buyers and sellers, and offers a streamlined process and liquid market to our clients. The platform provides options including online auctions and "buy now" listings.

The Transfer Process

Payment
into escrow

Transfer
request

RIR review

Addresses

Payment
released

Fees

Buyers and sellers are each responsible for their respective RIR transfer fees. There are different transfer fees charged by each RIR for block transfers. This is the case for both inter- and intra-RIR transfers.

Commissions

IPv4.Global's commission is paid by the seller. The amount varies by block size with larger blocks commissionable at a lower rate.

Escrow

Buyer remits funds for the purchase of IP addresses via IPv4.Global's free escrow services. For purchases under US\$30,000, payment can even be made by credit card.

Transferring Addresses

Whether transferring addresses within a region or to a buyer in another RIR, we help you every step of the process.

Confirmation & Closing

When IP addresses have transferred, funds are disbursed from escrow to seller.

About IPv4.Global

The Premier IPv4 Marketplace

As trusted marketplace leaders, IPv4.Global is dedicated to reliable, transparent service. IPv4.Global has completed more transfers than anyone else worldwide: our experience gets results.
