

Put your digital infrastructure to work for your business

Keep operations moving, make budgets go further, and give your team more control without changing a thing.

IPv4.Global and Hilco Digital Assets combine deep technical expertise and market knowledge to help you make informed decisions about your digital assets and network infrastructure. From planning investments to managing everyday operations, we help you get more from the resources you have.

DIGITAL INFRASTRUCTURE CYCLE

CLIENT BENEFITS

- One trusted partner across the full lifecycle
- Identify opportunities to optimize resources and unlock value
- Greater visibility across domains, IPs and DDI
- End-to-end infrastructure coverage
- Improve governance and operational resilience
- Build a stronger, more adaptable digital foundation

Monetize Maximize your budget for today's needs and tomorrow's priorities.

Whether you're expanding your network, building a brand, or releasing capital, we help you decide what to acquire, retain, or monetize and manage the process through execution.

- Turn surplus IPv4 space and unused domains into sale proceeds or recurring lease revenue.
- Buy or lease IPv4 addresses through the largest transparent IPv4 marketplace.
- Acquire domains that support your brand and business strategy.
- Realize the value of premium domains through sales with a market-leading domain advisor.

Modernize A deeper understanding of the resources your business depends on.

Our advisors and technical experts establish what you hold, how it is used, and who is responsible across teams, locations, and acquisitions, giving your organization a common foundation for decisions.

- Reconcile IPv4, IPv6, and domain inventories with the services they support.
- Distinguish essential resources from underused holdings.
- Strengthen oversight of domain renewals, access, and ownership.
- Rationalize portfolios and align acquisitions, renewals, and IPv6 planning with growth.

Optimize Give your team more time to move the business forward.

Our integrated DNS, DHCP, and IP address management (DDI) solutions simplify daily network administration without requiring changes to your technology stack.

- Automate address assignments, DNS updates, and provisioning.
- Reduce repetitive work and support faster deployment.
- Improve network data and management consistency across locations and business units.
- Extend your team with professional and managed services.

From strategy through execution, we work with your systems and your team to improve operations, increase value, and support whatever comes next.
